## AUTOMOTIVE

[duracell-automotive.com](http://duracell-automotive.com)

## LANGLEBIGKEIT, POWER, INNOVATION

**Die neue Kraft auf Europas Straßen.** Duracell – dieser Name steht für unvergleichliche Langlebigkeit, volle Power in extremen Situationen und kontinuierliche Weiterentwicklung der Produkte. Moderne Fahrzeuge verlangen heutzutage einer Starterbatterie alles ab. Duracell Batterien sind dafür gemacht, Tag für Tag die volle Leistung und verlässliche Startsicherheit zu bringen. Die Produktpalette reicht von der „Starter“ – dem Einstieg in die Markenwelt von Duracell über die „Advanced“, den AGM- und EFB-Spezialisten für Start/Stopp-Fahrzeuge bis hin zum Schwerstarbeiter „Professional“ für Trucks, Busse und Landmaschinen.

## LONG LIFE, POWER, INNOVATION

**The new force on Europe's streets.** Duracell – this name stands for ultimate durability and life, maximum power in extreme situations and continuous further product development. Modern vehicles now make massive demands on starter batteries. Duracell Batteries are constructed, to deliver maximum performance and reliable starting every single day, and in all conditions. The product range from the ‚Starter‘ – the entry into the Duracell brand, and continue through the ‚Advanced‘, the AGM and EFB types for start stop applications, up to the ultimate hard working ‚Professional‘ for trucks, buses and agricultural vehicles.

## DATEN UND FAKTEN

- Verlässliches Kaltstartverhalten
- Sicherheit und Auslaufschutz durch 4-Kammern-Flachdeckel mit integriertem Rückzündschutz
- Absolut wartungsfrei dank moderner Calcium-Technologie
- 12 Batterietypen von 42Ah bis 95Ah
- Produktkennzeichnung mit UK-Nr. und EN/SAE Kaltstartstrom
- Optimales Preis-Leistungs-Verhältnis

## FACTS AND FIGURES

- Reliable starting power
- Safety and leak protection due to a four-chamber flat lid with integrated flame arrester
- Modern calcium technology – zero maintenance
- 12 battery models from 42Ah to 95Ah
- Product classification with UK number and EN/SAE cold crank power
- Optimum price-performance ratio

# DURACELL® STARTER

## QUALITÄT & ZUVERLÄSSIGKEIT

### Der Einstieg in die hochqualitative Markenwelt von Duracell.

Die modernst ausgestattete Duracell Starter punktet mit einem optimalen Preis-Leistungsverhältnis und ist die erste Wahl für Kunden, die optimale Performance zum Superpreis wünschen. Denn Duracell Starter lässt keine Wünsche offen: Verlässliche Kraft bei jedem Kaltstart, absolute Wartungsfreiheit dank moderner Vollcalcium-Technologie und höchste Sicherheit. Dafür sorgt der 4-Kammern Auslaufschutz. Kein Auslaufen von Batterie-säure bei Rüttelbelastung, optimierte Betriebssicherheit durch Zentralentgasung und eingeschweißte, unverlierbare Rückzündschutzfritte. Transparente Produktauszeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom und 12 Batterietypen 42 Ah bis 95 Ah sind weitere Beweise für die universellen Einsatzmöglichkeiten dieser hochwertigen Batterie.

## QUALITY & RELIABILITY

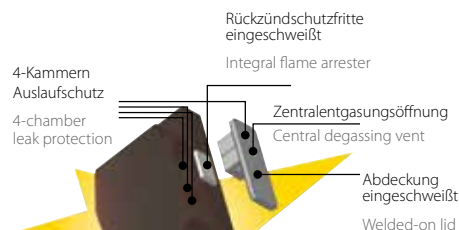

### The entry into the high quality world of the Duracell brand.

The Duracell Starter, built to the the most modern standards, offers an optimal combination of price and performance and is the obvious choice for customers who demand an excellent product for a super price. In this respect, Duracell Starter is the ideal solution – Reliable power for every engine start, completely maintenance free by means of modern full calcium technology, and the highest safety standards.

The 4-chamber leak protection feature ensures no acid leakage of acid if the battery is exposed to vibration, maximum safety once installed via the central venting system and an integral flame arrestor to protect against external ignition. Clear product part numbering, including EN/SAE Cold cranking values and UK part numbering and a range of 12 battery types from 42Ah up to 95Ah demonstrate the universal suitability of this high value battery.

### 4-Kammern Auslaufschutz: bewährte Sicherheit

### 4-chamber leak protection: proven safety

## DATEN UND FAKTEN

- ▶ Optimierte Kaltstartwerte, maximale Startkraft
- ▶ Voll-Calcium-Technologie – absolut wartungsfrei
- ▶ Unterstützt hohe Bordnetzströme dank robustem Zyklenverhalten
- ▶ Höchste Auslauf-, Rückzünd- und ESD-Sicherheit
- ▶ Vibrationssicher dank Bodenverklebung der Elektroden
- ▶ 20 Batterietypen von 40Ah bis 110Ah
- ▶ Produktkennzeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom

## FACTS AND FIGURES

- ▶ Improved cold crank characteristics, maximum starting power
- ▶ Modern calcium technology – zero maintenance
- ▶ Supports high on-board power due to robust cyclical behaviour
- ▶ Maximum leak and external ignition protection, superior ESD-safety
- ▶ Vibration resistant due to the bonding of the plates to the battery floor
- ▶ 20 battery models from 40Ah to 110Ah
- ▶ Product classification with UK number and EN/SAE cold crank power

# DURACELL®

## ADVANCED

## MEHR POWER & LEBENSDAUER

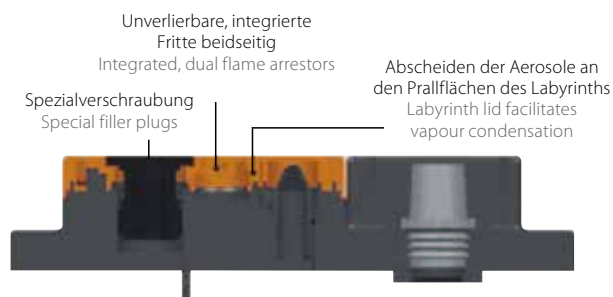

**Maximale Startkraft und Bordpower.** Die Duracell Advanced ist der Inbegriff der Markenqualität von Duracell-Automotive! Diese Energiespender erfüllen die strengen Vorgaben der führenden Automobilbauer – also die ideale Batterie für den modernen PKW. Das Bordkraftwerk vereint Voll-Calcium Technologie für mehr Startkraft mit größtmöglicher Sicherheit durch den Double-Lid Auslaufschutz. Dieser Batteriedeckel sorgt für absolute Auslaufsicherheit bei hohen Neigungswinkeln oder Überschlag, verbesserte Absicherung gegen Rückzündung, ESD Schutz gegen elektrostatische Aufladung und verfügt über eine beidseitig montierbare Gasableitung. Ideal für moderne SUV. Duracell Advanced punktet dazu mit optimierten Kaltstartwerten, mit robustem Zyklenverhalten und ist absolut wartungsfrei. 20 Batterietypen passen für fast alle europäischen und asiatischen Fahrzeuge.

## EXTRA POWER & LIFE

**Maximum power for starting and for the vehicle systems.** The Duracell Advanced is the embodiment of the Duracell Automotive brand quality! This power source meets the highest demands of leading vehicle manufacturers, so it is the ideal battery for the modern car. Its construction combines full calcium technology for improved starting power, with the highest possible safety via the double lid. This battery lid ensures the acid is fully contained even if the battery is tipped up or rolls over. Additional features include improved protection against external ignition, anti static buildup protection, and dual option remote venting. Ideal for modern SUV's. Duracell Advanced offers optimized cold cranking values, robust cyclic capability and is completely maintenance free. 20 battery types give almost complete range cover for all European and Asian vehicles.

### Double Lid – Der Hochsicherheitsdeckel der Duracell Advanced

**Double Lid – The first class  
safety lid of the Duracell  
Advanced**

## DATEN EXTREME EFB

- Zyklenfeste Starterbatterie – zwei Typen mit 60/70Ah
- 2-fache Zyklenfestigkeit im Vergleich zu Starterbatterien
- Vlies-Auflage am Separator und spezielle Rezeptur der Aktivmasse
- Double-Lid Deckel sorgt für maximale Auslauf- und Betriebssicherheit
- Höchste Rüttelfestigkeit V3 gemäß EN 50342-1
- Absolut wartungsfrei dank Voll-Calcium-Technologie
- Produktkennzeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom

## DATEN EXTREME AGM

- Ventilregulierte Vliesbatterie – drei Typen mit 70/80/92Ah
- 3-fache Zyklenfestigkeit im Vergleich zu Starterbatterien
- Auslaufsicher dank im Glasvlies gebundenem Elektrolyt (Absorbent Glass Mat)
- Absolut wartungsfrei durch Rekombinationstechnik
- Geringer Innenwiderstand – höchste Startleistung
- Einbau bis maximal 90° Neigungswinkel möglich
- Produktkennzeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom

## FACTS EXTREME EFB

- Cycle-resistant starter battery – two models with 60/70Ah
- Twice the cycle resistance compared to standard batteries
- Nonwoven cover on the separator and special active mass composition
- Double lid cover for maximum leak protection and operational safety
- Top V3 vibration resistance rating pursuant to EN 50342-1
- Modern calcium technology – zero maintenance
- Product classification with UK number and EN/SAE cold crank power

## FACTS EXTREME AGM

- Valve-regulated nonwoven glass mat battery (VRLA) – three models with 70/80/92Ah
- Three times greater cycle resistance than standard batteries
- Leak-proof due to electrolyte bonding into a glass nonwoven (absorbent glass mat)
- Zero maintenance owing to recombination technology
- Very low internal resistance – maximum starting power
- Installation in a lateral position possible (max. 90° angle)
- Product classification with UK number and EN/SAE cold crank power

## DURACELL® EXTREME

### DIE START/STOPP-SPEZIALISTEN

**EFB- und AGM-Technik für Start/Stopp-Fahrzeuge.** Die Duracell Extreme ist für den Einsatz in umweltfreundlichen Fahrzeugen mit Motor-Start/Stopp-Funktion konzipiert. Die EFB (Enhanced Flooded Battery) kommt vorwiegend bei Mittelklasse-PKW, Kleinwagen und einfachen Start/Stopp-Systemen zum Einsatz. Die AGM (Absorbent Glass Mat) wird vor allem bei Mittel- und Oberklassefahrzeugen mit Start/Stopp-Systemen und Bremsenergieerückgewinnung (Rekuperation) eingesetzt. Die Duracell Extreme Premiumprodukte erfüllen die Vorgaben der führenden Automobilhersteller und sind mit insgesamt fünf Typen von 60Ah bis 92Ah die erste Wahl für spritsparende PKW.

### THE STOP-START SPECIALISTS

**EFB- und AGM- Technology for stop-start vehicles.** The Duracell Extreme is built for use in environmentally friendly cars which incorporate the stop-start function. The EFB (Enhanced Flooded Battery) is used primarily in medium and small cars and LCV that have only basic stop-start features. The AGM (Absorbent Glass Mat) battery is mainly used on medium and executive/luxury vehicles, where more complex stop-start functions together with brake energy recuperation are standard. The Duracell Extreme premium products meet the demands of leading car manufacturers, and with a range of five types from 60Ah to 92Ah are the first choice for fuel efficient cars.

**Duracell Extreme – die modernen Kraftwerke für Start/Stopp-Fahrzeuge**

**Duracell Extreme – the modern power supply for stop-start vehicles**

### DATEN PROFESSIONAL HD

- EN 50342-1 Einstufung E3/V3: Heavy Duty zyklus- und rüttelfest
- Einfache Wartung: Sichtbare Elektrolyt-Markierung, praktische Verschraubung
- Satzverklebung sorgt für robuste Konstruktion
- Tasche separaten gegen Kurzschluss
- Produktkennzeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom
- Optimales Preis-Leistungs-Verhältnis

### DATEN PROFESSIONAL SHD

- EN 50342-1 Einstufung E4/V3: Super Heavy Duty extra zyklus- und rüttelfest
- Calcium-Technologie für absolute Wartungsfreiheit
- 6 Batterietypen von 110 bis 225Ah
- Höchste Sicherheit: Zentralentgasung, Rückzündschutz, Sicherheitsverschraubung
- Verbesserter Auslaufschutz bei Typen 145/180/225 Ah – 4-Kammern-Flachdeckel mit eingeschweißter, unverlierbarer Rückzündfritte
- Produktkennzeichnung mit UK-Nummer und EN/SAE-Kaltstartstrom

### FACTS PROFESSIONAL HD

- EN 50342-1 rating E3/V3: Heavy Duty cycle- and vibration resistant
- Simple maintenance: externally visible electrolyte level markings, practical plugs
- Robust design with set bonding
- Envelope separator to protect against short circuits
- Product classification with UK number and EN/SAE cold cranking power
- Optimum price-performance ratio

### FACTS PROFESSIONAL SHD

- EN 50342-1 rating E4/V3: Super Heavy Duty extra cycle- and vibration resistant
- Modern calcium technology – zero maintenance
- Six models from 110 to 225Ah
- Superior Safety: Central degassing, external ignition protection, safety plugs
- Improved leak protection for models 145/180/225Ah due to 4-chamber flat lid with an integral flame arrester
- Product classification with UK number and EN/SAE cold crank power

## DURACELL® PROFESSIONAL

### SUPERHART IM NEHMEN!

**Mit der Duracell Professional kommen Nutzfahrzeuge sicher ans Ziel!**

Für den tagtäglichen Einsatz in LKW, Bussen, Land-/Forst- und Baumaschinen müssen Starterbatterien aus einem besonderen „Holz“ geschnitzt sein! Das Kraftpaket Duracell Professional – erhältlich als HD – Heavy Duty und SHD – Super Heavy Duty – startet jeden Motor zuverlässig in jeder Situation und versorgt das Bordnetz mit ausreichend Strom. Die gesamte Konstruktion ist auf absolute Robustheit ausgelegt.

Die SHD-Versionen warten mit höchsten Sicherheitsstandards wie Zentralentgasung und Sicherheitsverschraubungen auf. Dazu kommt bei den 145/180/225Ah Batterietypen der zentralentgaste 4-Kammern-Flachdeckel als optimierter Auslaufschutz zum Einsatz, der über eine unverlierbare, weil eingeschweißte, Rückzündfritte verfügt.

### FOR THE HARDEST DEMANDS!

**Install Duracell Professional and the truck will reach its destination!**

In order to perform daily in trucks, buses, agricultural and construction machinery, batteries have to be made out of something special! The power source that is Duracell Professional – available as HD/Heavy Duty and SHD/Super Heavy Duty – will reliably start every engine in all conditions, together with providing sufficient energy to the onboard vehicle systems. The complete construction is based on absolute robustness.

The SHD versions offer the highest safety features such as central venting and safety plugs. In addition, the 145/180/225Ah batteries feature the centrally vented 4-chamber flat lid, to prevent electrolyte leakage, which incorporates an integral flame arrester for additional security.

**Aktive Sicherheit: zentralentgaster  
4-Kammern-Flachdeckel –  
aufgesteckter Kurzschlusschutz**

**Active safety: central degassing  
4-chamber flat lid – short-circuit  
protection feature**

## 1. Lagerung und Transport

- Batterien sind trocken, lichtgeschützt und kühl (frostfrei) zu lagern
- Starterbatterien spätestens ab einer Ruhespannung  $\leq 12,5$  V nachladen (siehe Punkt 3)
- Duracell deklariert alle Starterbatterien als Batterie nass, gefüllt mit Säure nach der UN 2794!
- Gefüllte Batterien sind aufrecht zu transportieren und zu lagern, da sonst Säure austreten kann.
- Beim Transport die Batterie gegen umkippen und verrutschen sichern.
- Einhaltung **First In First Out**.

## 2. Ein- und Ausbau aus dem Fahrzeug

**Nur Batterien mit einer Ruhespannung  $> 12,5$  V in ein Fahrzeug einbauen!**

- Beachten Sie bitte die Bedienungsanleitung des Fahrzeuges.
- Vor dem Ein- und Ausbau der Batterie den Motor und alle Stromverbraucher ausschalten.
- Kurzschlüsse durch Werkzeuge vermeiden.
- Beim Ausbau zuerst Minuspol (-), dann Pluspol (+) abklemmen.
- Spannungsunterbrechungen können zu Datenverlust führen! Abhilfe bietet der Duracell Memory Saver.
- Vor Einbau der Batterie die Stellfläche im Fahrzeug reinigen.
- Batterie fest verspannen.
- Batteriepole und Polklemmen reinigen und mit säurefreiem Fett leicht einfetten.
- Beim Einbau zuerst Pluspol (+), dann Minuspol (-) anklemmen.
- Auf festen Sitz der Polklemmen achten.

## 3. Nachladung von Batterien

- Bei Nassbatterien vor dem Laden Elektrolytstand kontrollieren und falls erforderlich entmineralisiertes oder destilliertes Wasser bis zur max. Säurestandsmarkierung bzw. 15 mm über die Plattenoberkante auffüllen.

**Duracell empfiehlt herkömmliche Nassbatterien außerhalb des Fahrzeuges mit 16 V für 24 Stunden zu laden.**

**Achtung:** viele Ladegeräte haben eine Art Wiederbelebungsmodus für tiefentladene Ca/Ca Batterien, bei denen die Ladespannung allerdings nur für kurze Zeit 16 V hält!

**Duracell Extreme AGM:: Unbedingt mit spannungsgeregeltem Ladegerät laden (max. 14,8 V)! Die Verwendung herkömmlicher, nicht spannungsgeregelter, Ladegeräte zerstört die Batterie durch Überladung und verursacht ein Entweichen des Elektrolytes!**

**Achtung:** Hinweise des Fahrzeugherstellers beim Abklemmen beachten.

- Batterien dürfen nur mit Gleichstrom geladen werden. Pluspol (+) der Batterie mit dem Pluspol (+) des Ladegeräts und Minuspol (-) mit Minuspol (-) des Ladegeräts verbinden.
- Ladegerät erst nach dem Anschluß der Batterie einschalten. Bei Ende der Ladung erst das Ladegerät abschalten.
- Als Ladestrom wird zumindest ein Zehntel der Kapazität empfohlen. (z.B. 44 Ah: 10 = 4,4 A Ladestrom).
- Die Säuretemperatur darf während der Ladung  $55^{\circ}\text{C}$  nicht übersteigen. Bei Überschreitung ist die Ladung zu unterbrechen.
- Die Ladung ist beendet, wenn der Strom gegen 0 geht bzw. nicht mehr abnimmt oder das Automatikladegerät abschaltet.
- Beim Laden für gute Belüftung sorgen.
- Die Verschraubungen der Batterien müssen nicht geöffnet werden.
- Beachten Sie dass die 1,2 fache der entnommenen Kapazität wieder reitour geladen werden muss. (z.B.: entnommene Kapazität: 30 Ah, Rückladung 36 Ah!)

**Achtung:** Während der Ladung bildet sich hochexplosives Knallgas! Feuer, Funken, offenes Licht und Rauchen verboten!

### Nachladung von Batterien im Fahrzeug:

Generell gilt dass vollautomatische Ladegeräte (Ladespannungsbegrenzung mit 14,8 V) für die Ladung der im Fahrzeug verbauten Batterie gut geeignet sind. Sollte Ihr Ladegerät einen automatischen Modus mit Spannungen  $> 15,9$  V haben ist die Batterie unbedingt von der Bordelektronik zu trennen bzw. aus dem Fahrzeug auszubauen.

Im schlimmsten Fall könnten die verbauten Steuergeräte durch Überspannungen zerstört werden, der dadurch entstandene Schaden wäre enorm!

Bitte achten Sie auf die Type des Ladegerätes. Vielfach finden sich in der Bedienungsanleitung des Fahrzeugherstellers bzw. in jener des Ladegeräteherstellers wertvolle Tipps zum Laden im Fahrzeug.

## 4. Wartung

Um eine lange Lebensdauer der Batterie zu erreichen, sollten Sie folgende Hinweise beachten:

- Die Oberfläche der Batterie sauber und trocken halten.
- Säurestand regelmäßig überprüfen und, falls erforderlich, entsalztes oder destilliertes Wasser nachfüllen. Niemals Säure nachfüllen. Bei hohem Wasserverlust sollte die Reglerspannung von einem Fachmann überprüft werden.
- Keine sogenannten Aufbesserungsmittel verwenden.
- **Achtung:** Sinkt die Ruhespannung einer Batterie  $\leq 12,5$  V soll diese umgehend nachgeladen werden damit es zu keiner dauerhaften Schädigung der Batterie kommt.

**Duracell Extreme AGM:: AGM Batterien dürfen nicht geöffnet werden!**

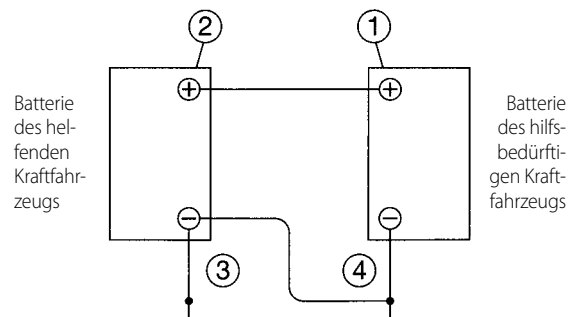

**Eine Säuredichtemessung bzw. ein Nachfüllen von destilliertem Wasser ist nicht möglich bzw. nicht nötig.**

**Duracell Tipp:** Eine quartalsweise Nachladung ihrer Batterie verlängert die Lebensdauer immens!

## 5. Starthilfe

- Aufgrund der sensiblen Elektronik im Fahrzeug soll generell nur mit einem Duracell Booster Starthilfe gegeben werden.
- Starthilfe von Auto zu Auto kann beim Abklemmen zu Spannungsspitzen führen und dabei die Elektronik des Fahrzeugs beschädigen oder sogar zerstören.
- Daher bei Gebrauch von Starterkabeln nachstehende Anleitung befolgen!
- Bei Starthilfe mit Starterkabel empfiehlt sich der Gebrauch von genormten Starterkabeln (z.B. nach DIN 72 553).
- Gebrauchsanweisung der Starterkabel beachten.
- Nur Batterien gleicher Nennspannung verbinden.
- **Anklemmen: Beide Kfz-Motoren aus!**

Zuerst die beiden Pluspole 1 mit 2, dann den Minuspol des Spenderfahrzeugs 3 mit einer metallisch blanken Stelle am hilfsbedürftigen Fahrzeug 4 abseits von der Batterie verbinden. (Hinweise des Fahrzeugherstellers beachten).

- Jetzt hilfsbedürftiges Fahrzeug max. 15 sec. starten, dabei Spenderfahrzeug nicht anstarten.
- Abklemmen: Kabel in umgekehrter Reihenfolge trennen.

## 6. Außerbetriebsetzung

- Batterie laden (siehe Punkt 3) und kühl lagern.
- Falls die Batterie im Fahrzeug verbleibt, Minusklemme abnehmen.
- Ruhespannung regelmäßig prüfen (siehe Punkt 4).

## 7. Einfluss von hohen Temperaturen

Sind Batterien über einen längeren Zeitraum hohen Temperaturen ausgesetzt, fördert dies immer den Wasserverbrauch und die Korrosion der Gitter. Korrodierte Gitter sind nicht mehr in der Lage den Strom zu leiten und die Batterie versagt ihren Dienst. Durch das ebenso entstehende Gitterwachstum können Kurzschlüsse in der Batterie entstehen.

#### Warnhinweise und Sicherheitsvorschriften für Blei-Säure-Batterien

Hinweise auf der Batterie, in der Gebrauchsanweisung und in der Fahrzeugbetriebsanleitung befolgen.

Augenschutz tragen.

Kinder von Säure und Batterien fernhalten.

#### Explosionsgefahr:

- Bei Ladung von Batterien entsteht ein hochexplosives Knallgasgemisch, deshalb:

#### Feuer, Funken, offenes Licht und Rauchen verboten:

- Funkenbildung beim Umgang mit Kabeln und elektrischen Geräten vermeiden!  
- Kurzschlüsse vermeiden!

#### Verätzungsgefahr:

- Batteriesäure ist stark ätzend, deshalb:  
- Schutzhandschuhe und Augenschutz tragen!  
- Batterie nicht kippen, aus den Entgasungsöffnungen kann Säure austreten.

#### Erste Hilfe:

- Säurespritzer im Auge sofort einige Minuten mit klarem Wasser ausspülen!  
Danach unverzüglich einen Arzt aufsuchen!  
- Säurespritzer auf der Haut oder Kleidung sofort mit Säureumwandler oder Seife neutralisieren und mit viel Wasser nachspülen!  
- Bei getrunkenen Säure sofort Arzt konsultieren!

#### Warnvermerk:

- Batterien nicht ungeschützt direktem Tageslicht aussetzen!  
- Entladene Batterien können einfrieren, deshalb frostfrei lagern.

#### Entsorgung:

- Altbatterien bei Sammelstelle abgeben. Beim Transport sind die unter Pkt. 1 angeführten Hinweise zu beachten. Altbatterien nie über den Hausmüll entsorgen!

#### Kälteprüfstrom für Starterbatterien nach verschiedenen Normen

Kaltstartstrom ist ein Maßstab für die Startfähigkeit einer Batterie bei tiefen Temperaturen von  $-18^{\circ}\text{C}$

##### 1. DIN (Deutsche Industrie-Norm) DIN EN 50342

Test wird bei  $-18^{\circ}\text{C}$  durchgeführt. Die Entladezeit soll nach einer Entladung mit dem Kälteprüfstrom  $I_{cc}$  bei einer Schlussspannung von 7,5 V mindestens noch 10 Sekunden betragen.

Außerdem muss die Batterie noch 2 weitere Anforderungen erfüllen.

Die Zeit bis 6 V Schlussspannung soll betragen:

Nach C1:  $t_{6V} \geq 90$  Sekunden

Nach C2:  $t_{6V} \geq 150$  Sekunden

##### 2. SAE (Amerikanische Norm)

Test wird bei  $-18^{\circ}\text{C}$  durchgeführt. Die Entladezeit mit dem Kälteprüfstrom bis 7,2 V soll mindestens 30 Sekunden betragen.

$$SAE = \frac{DIN}{2} \times 3 + 40$$

##### 3. IEC (International Electrotechnical Commission) 95-1

Test wird bei  $-18^{\circ}\text{C}$  durchgeführt. Bei einer Entladung mit dem Kälteprüfstrom ( $I_{cc}$ ) soll die Spannung nach 60 Sekunden noch mindestens 8,4 V betragen.

$$IEC = \frac{DIN}{0,85}$$

#### Reservekapazität

Die Reservekapazität ist die Kapazitätsreserve, die die Batterie in Minuten bei Ausfall der Lichtmaschine liefern kann, bis evtl. die nächste Werkstatt erreicht wird. Sie ist jedoch von den Verbrauchern im Auto abhängig. IEC sieht folgenden Test vor:

Entladung mit 25 A bis zu einer Schlussspannung von 10,5 V bei einer Temperatur von  $27^{\circ}\text{C}$ .

Gemessene Zeit in Minuten = Reservekapazität

##### 4. EN (Europa-Norm) DIN EN 50342

Test wird bei  $-18^{\circ}\text{C}$  durchgeführt. Die Entladezeit soll nach einer Entladung mit dem Kälteprüfstrom  $I_{cc}$  bei einer Schlussspannung von 7,5 V mindestens noch 10 Sekunden betragen.

Außerdem muss die Batterie noch 2 weitere Anforderungen erfüllen. Die Zeit bis 6 V Schlussspannung soll betragen:

Nach C1:  $t_{6V} \geq 90$  Sekunden

Nach C2:  $t_{6V} \geq 150$  Sekunden

$$EN (C_1) = \frac{IEC}{0,6} \quad IEC = \frac{DIN}{0,85}$$

$$EN (C_2) = \frac{DIN}{0,6} \quad EN (C_1) = \frac{DIN}{0,6 \times 0,85} = \frac{DIN}{0,51}$$

Da die vorgeschriebenen Stufungen in der EN definiert sind, sind die Ströme durch Auf- bzw. Abrundungen anzupassen:

< 200 A – Stufe 10 A  
200 – 300 A – Stufe 20 A (220, 240, 260, 280 A)  
300 – 600 A – Stufe 30 A (330, 360, 390, 420, 450, 480, 510, 540, 570 A)  
600 – 800 A – Stufe 40 A (640, 680, 720, 760 A)  
> 800 A – Stufe 50 A

# INSTRUCTIONS FOR THE STARTER BATTERIES

## 1. Storage and transport

- Store batteries in a dry, light-protected and cool environment (frost-free).
- At the latest, recharge starter batteries in the case of off-load voltage > 12.5 V (see Note 3).
- Duracell declares all its starter batteries as wet and filled with acid in accordance with UN 2794.
- Wet-filled batteries must be transported in an upright position, as otherwise acid may escape.
- During transportation secure the battery to prevent it falling over or sliding around.
- **First in, first out (FIFO) receipt.**

## 2. Installation and removal from the vehicle.

**Only install batteries with an off-load voltage of > 12.5 V.**

- Follow the vehicle instructions.
- Switch off the engine and all power consumers prior to installing or removing the battery.
- Avoid short circuits due to tools.
- When removing the battery, first disconnect the negative (-) terminal and then the positive (+) terminal.
- Interruptions to the power supply may result in data loss. The Duracell Memory Saver can help.
- Prior to installing the battery, clean the battery compartment.
- Ensure that the battery is secured tightly.
- Clean terminals and battery clips and lubricate slightly with acid-free grease.
- When fitting the battery first connect the positive (+) terminal and then the negative (-) terminal. Ensure that the clips are secured.

## 3. Battery recharging

- Before charging wet batteries, check the electrolyte level and top up if necessary with de-ionised or distilled water to the acid level mark or 15 mm above the upper edge of the plates at a maximum.

**Duracell recommends that standard wet batteries be charged outside the vehicle with 16 V for 24 hours.**

**Warning!** Many chargers have a type of resuscitation mode for deep discharged Ca/Ca batteries. However, these only maintain a charging voltage of 16 V for a short period.

**Duracell Extreme AGM. Always recharge with a voltage-controlled charger (max. 14.8 V). The use of a standard charger without voltage control destroys the battery due to overloading and cause the electrolyte to escape.**

**Warning!** Follow the vehicle manufacturer's instructions when disconnecting the terminals.

- Batteries may only be charged with direct current. Connect the positive (+) battery terminal to the positive (+) terminal of the charger, and the negative (-) battery terminal to the negative (-) terminal of the charger.
- Do not switch on the charger until the battery has been connected. First switch off the charger when charging is completed.
- It is recommended that the charging current be equal to at least one tenth of the capacity (e.g. 44 Ah: 10 = 4.4 A charging current).
- The temperature of the acid may not be higher than 55°C during charging. If the temperature exceeds this level, the charging process must be discontinued.
- Charging is finished when the current drops to 0 or stops falling, or if the automatic charger switches off.
- Charging must be performed in a well-ventilated room.
- The battery screws may not be opened.
- Ensure that recharging amounts to 1.2 times the consumed capacity (e.g. Consumed capacity 30 Ah, recharge 36 Ah).

**Warning!** Oxyhydrogen gas is formed during charging! Fires, sparks, open flames and smoking are strictly prohibited!

### Recharging batteries in the vehicle.

As a rule, fully automatic chargers (max. charging voltage 14.8 V) are well suited to the charging of batteries installed in the vehicle. Should the charger have an automatic mode with > 15.9 V voltages, the battery must be separated from the vehicle electrical system or removed from the vehicle. Otherwise, in a worst-case scenario the installed control devices can be destroyed due to overvoltage with huge resultant damage.

Please take careful note of the battery charger type. Useful tips regarding charging in the vehicle are often contained in the operating instructions of the vehicle manufacturer or those of the charger producer.

## 4. Maintenance

In order to ensure long battery life, the following instructions should be followed:

- Keep the surfaces of the battery clean and dry.
- Check the acid levels regularly and if necessary top up with deionised or distilled water. Never top up with acid. If a substantial water loss occurs, an expert should check the voltage regulator.
- Do not put so-called additives into the battery acid.
- **Warning!** Should the off-load voltage fall to < 12.5 V, recharge immediately in order to prevent lasting battery damage.

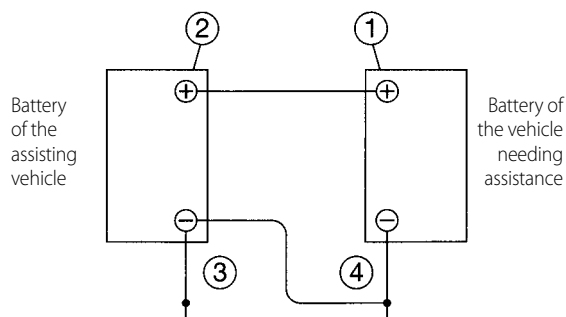

**Duracell Extreme AGM. AGM batteries may not be opened. Acid density measurement and topping up with distilled water are neither possible nor necessary.**

**Duracell tip.** Quarterly recharging of the battery greatly prolongs its life.

## 5. Assisted starting

- In view of the sensitive electronic components in the vehicle, as a rule starting assistance should only be provided by means of a Duracell Booster.
- Starting assistance from vehicle to vehicle can lead to voltage peaks during disconnection, which can damage or even destroy vehicle electronic systems.
- Therefore, it is essential that the following procedure be strictly observed when using starter cables!
- Standardised starter cables (e.g. in accordance with DIN 72 553) should always be used for giving starting assistance.
- Observe the instructions for use of the starter cables.
- Only connect batteries with the same nominal voltage.
- **When connecting the terminals, switch off both vehicle engines!**

First connect the two positive terminals (1) with (2). Then connect the negative terminal of the assisting vehicle (3) with (4), the blank metallic point on the vehicle needing assistance, away from the battery. (Observe the instructions of the vehicle manufacturer.)

- Now start the vehicle needing assistance for a maximum of 15 seconds. Do not start the assisting vehicle.
- When disconnecting the terminals, remove the cables in the reverse sequence to the above.

## 6. Decommissioning

- Charge the battery (see Note 3) and store in a cool dry place.
- Should the battery be left in the vehicle, disconnect the negative terminal.
- Regularly check the off-load voltage (see Note 4).

## 7. Influence of high temperatures

If batteries are subjected to high temperatures for long periods, this promotes both increased water consumption and grid corrosion. A corroded grid is no longer able to conduct current and therefore the battery fails. Resultant grid growth can also result in battery short circuits.

### Warnings and Safety Rules for Lead-Acid Batteries

Take note of the information on the battery, the instructions for use and the operating instructions of the vehicle.

Wear eye protection.

Keep children away from acid and batteries.

#### Explosion danger:

- A highly explosive oxyhydrogen gas is emitted during battery charging therefore:

#### No naked flames, sparks, naked lights or smoking:

- Avoid sparking when handling cables and electronic devices.
- Avoid short circuits.

#### Chemical burns danger:

- Acid is highly caustic therefore:
- Wear gloves and eye protection.
- Do not tilt the battery, as acid could spill out from the degassing vents.

#### First Aid:

- If acid splashes into the eyes rinse immediately with clear water for several minutes. Then consult a physician.
- If acid splashes onto the skin or clothes neutralise immediately by using an alkaline solution or soap and rinse with large amounts of water.
- If acid is swallowed consult a physician immediately.

#### Warning:

- Do not expose batteries to direct sunlight without protection.
- Always store batteries in a frost-free area, as discharged batteries can freeze.

#### Disposal:

- Hand in used batteries at a collection centre. During transportation take note of the instructions contained in Item 1. Never dispose of old batteries with domestic waste.

### Low-temperature Test current for Starter batteries according to various standards

Low-temperature test current is a benchmark for the starting capacity of a battery at minus 18°C.

#### 1. DIN (Deutsche Industrie Norm) DIN EN 50342

The test is carried out at minus 18°C. Following a discharge with low-temperature current I at an end voltage of 7.5 V, the discharge period should amount to at least 10 seconds.

In addition, the battery must fulfil two additional requirements.

The period up to 6 V final voltage shall amount to:

After C1: t 6 V > 90 seconds

After C2: t 6 V > 150 seconds

#### 2. SAE (US standard)

The test is carried out at minus 18°C. With low-temperature current of up to 7.2 V, the discharge period should amount to at least 30 seconds.

$$SAE = \frac{DIN}{2} \times 3 + 40$$

#### 3. IEC (International Electrotechnical Commission) 95-1

The test is carried out at minus 18°C. Following a discharge with the low-temperature current (I cc) after 60 seconds the voltage should amount to at least 8.4 V.

$$IEC = \frac{DIN}{0.85}$$

#### Reserve capacity

Following dynamo failure, reserve capacity represents the number of minutes during which a battery can supply power until the next repair shop can be reached. However, this figure is dependent upon the consumers in the vehicle. IEC envisages the following test:

Discharge with 25 A down to an end voltage of 10.5 V at a temperature of 27°C.

$$\text{Measured time in minutes} = \text{reserve capacity}$$

#### 4. EN (Europa Norm) DIN EN 50342

The test is carried out at minus 18°C. Following a discharge with the low-temperature current I at an end voltage of 7.5 V, the discharge period should amount to at least 10 seconds.

In addition, the battery must fulfil two additional requirements.

The period up to 6 V final voltage shall amount to:

After C1: t 6 V > 90 seconds

After C2: t 6 V > 150 seconds

$$EN (C_1) = \frac{IEC}{0.6} = \frac{DIN}{0.85}$$

$$EN (C_2) = \frac{DIN}{0.6} = \frac{EN (C_1)}{0.6 \times 0.85} = \frac{DIN}{0.51}$$

As the prescribed graduations are defined in the EN, the currents are to be adjusted by rounding up or down:

- < 200 A – Level 10 A
- 200 – 300 A – Level 20 A (220, 240, 260, 280 A)
- 300 – 600 A – Level 30 A (330, 360, 390, 420, 450, 480, 510, 540, 570 A)
- 600 – 800 A – Level 40 A (640, 680, 720, 760 A)
- > 800 A – Level 50 A
